M/V "AZALEA"
30,000 DWT BULK CARRIER
A-60 INSULATION OF ENGINE ROOM BULKHEAD

The purpose of this letter is to express our satisfaction with the performance of **BULMAR CONSULT** of VARNA in BULGARIA, to install the insulation of the Engine Room Bulkhead in order to obtain A-60 certification which was required for the carriage of ammonium nitrate cargo.

BULMAR CONSULT succeeded in completing the work on time, at very short notice, over an area extending for 600 m², i.e. the entire bulkhead from the Engine Room side, under the supervision of the classification society, which issued the certificate on completion of the work.
